AI Acceptable Use Policy

BROHAM | Fictional Policy • Portfolio Demonstration

Version 1.0 • October 2026 • Illustrative training resource, not a legal or operational policy

1. Purpose and Scope

Broham encourages thoughtful use of artificial intelligence (AI) to support appropriate business work while protecting people, information, and organizational trust. This illustrative policy applies to employees and other authorized personnel using AI for Broham-related tasks, including generative assistants, AI-enabled features, connected services, and meeting tools.

2. Core Responsibilities

- Use only AI tools, accounts, configurations, and features approved for the intended business purpose.
- De-identify employee and student information before entering it into AI. Do not provide names, IDs, contact details, or combinations of details that could identify a person.
- Provide the minimum information and access needed for an approved task. Never enter passwords, access tokens, or other credentials.
- Review AI outputs for accuracy, suitability, missing context, bias, and unsupported claims. The person using the result remains responsible for content used, referenced, shared, or published.
- Pause and seek guidance when approval, privacy, accuracy, or recording requirements are unclear.

3. Before You Prompt: Make Three Checks

Check the Tool

Confirm the AI product, work account, access method, configuration, and relevant feature are approved. Approval of one tool does not automatically approve its extensions, plugins, agents, models, connectors, or new capabilities. Personal, free, trial, and consumer accounts must not be used for Broham work unless specifically approved in writing.

Check the Task

Identify a legitimate business purpose. Use AI to assist with drafting, brainstorming, organizing, or other approved activities, not to bypass established reviews or automate consequential decisions without authorization. New tools, materially changed uses, and new integrations require review through Broham's fictional IT approval process.

Check the Information

Before typing, pasting, uploading, or connecting content, remove or generalize identifying details about employees and students. Removing a name alone may not prevent identification. Do not submit confidential records, sensitive personal information, health or payment details, government identifiers, privileged legal information, trade secrets, or other restricted data unless a specific written authorization and all required reviews are in place. De-identification alone does not authorize disclosure of otherwise restricted information.

4. Before You Trust: Review the Result

AI can produce convincing but incorrect or incomplete material. Before using its output, check facts against appropriate sources, assess fit for the audience and task, and look for unsupported statements, bias, omissions, or outdated information. Do not treat polished language or a confident tone as evidence of accuracy. A qualified human must make the final decision about use.

5. Before You Share or Connect

Do not upload organizational documents or grant AI access to email, calendars, drives, systems, meetings, repositories, or other data sources unless the specific integration, permissions, and intended use are approved. Access to information does not equal permission to provide it to AI. Limit connections to the minimum approved scope and reassess when a feature or use changes. Tool approval does not override data protection and de-identification requirements.

6. Before You Record or Transcribe

AI-enabled recording, transcription, and meeting summaries require a legitimate business need, an approved tool, and all required notices, consents, and authorizations. If someone objects, stop recording and follow the applicable process before resuming. Do not record restricted or privileged discussions without required written approval. Pause if sensitive topics arise. The meeting organizer must review generated transcripts and summaries for accuracy and appropriateness before sharing.

7. Reporting, Questions, and Accountability

If you accidentally share restricted information, notice unauthorized access, or identify a concerning AI output or integration, stop the activity and promptly report it through the organization's designated IT or security channel. When uncertain, consult the policy owner or IT before proceeding. Broham may review AI use for compliance with applicable organizational requirements.

8. Policy Administration

In this fictional example, the Information Technology function maintains the approved-tool list and reviews technical requests, while relevant business, privacy, legal, and security stakeholders review uses involving their areas. Requirements may change as tools and regulations evolve. Training examples do not replace approval or professional judgment.

PORTFOLIO NOTICE

Broham is a fictional organization. This document was independently written as a sample policy to support an instructional design portfolio demonstration. It does not describe the rules of any real employer and should not be adopted as legal, security, or privacy guidance without expert review.
